S. climate zones. Population is a good indicator of building distribution; however, if it were the only criterion, some climate zones would not be represented. Approximately 78 of the population is located in five of the 15 climate zones. To represent all U. S. climate zones and the highest building densities, we selected the most populous cities in each climate zone. Briggs et al. (2003) developed a climate zone classification system for DOE and ASHRAE Standard 90. 1-2004 based on SAMSON (NCDC 1993) weather data, as shown in Figure 1. An important characteristic of these climate zones is that they tend to run in east - west bands across the country; subdivisions for moist, dry, and marine divide these bands. As part of this effort, PNNL developed a set of typical locations (cities) based on their representativeness in each climate...
