For every perfect gas, there is a definite relation between the pressure and volume, and what is known as Boyle's Law has been found to hold true, viz. The pressure of a perfect gas at constant temperature varies inversely as the volume; that is, if the temperature remains constant the pressure becomes less as fast as the volume becomes greater, or conversely the volume becomes less as fast as the pressure becomes greater. Now if the pressure becomes twice as great, the volume becomes half as large, and if the volume becomes three times as great, the pressure will be only one-third as much. Hence we see that however the pressure may vary, the...
