

New Zealand Neuroptera; A Popular Introduction to the Life and Habits of May-Flies, Dragon-Flies, Caddis-Flies and Allied Insects Inhabiting New Zeala (Paperback)

Filesize: 2.33 MB

Reviews

A whole new eBook with a brand new point of view. It is definitely simplistic but shocks in the 50 percent of the publication. I am just pleased to explain how this is the greatest ebook i have read during my very own daily life and could be he best ebook for possibly.

(Mitchell Kuhn III)

NEW ZEALAND NEUROPTERA; A POPULAR INTRODUCTION TO THE LIFE AND HABITS OF MAY-FLIES, DRAGON-FLIES, CADDIS-FLIES AND ALLIED INSECTS INHABITING NEW ZEALA (PAPERBACK)

Rarebookclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1904 edition. Excerpt: .wet mud, or sand, beneath the stone, and carefully smooths it within. During the course of a few days the larva becomes somewhat shrivelled, and after a week or so sheds its skin and appears as a pupa. This habit of leaving the water, just at the time when the shrinkage in the volume of the rivers occurs, is no doubt very beneficial to the insect as, unlike many other neuropterous pupae, it is able to imbibe air and thus escape destruction by drought. The pupa of *C. diversus*, in its natural curved position, measures about 1 inch in length. Its limbs closely resemble those of the perfect insect, except the wings which are, of course, rudimentary. The larval gills are replaced by a series of wart-like projections, situated on each side of the first eight segments of the abdomen. This pupa is not endowed with the power of locomotion until shortly before it undergoes its final transformation. About this time the legs are gradually stretched out, and in a few days are sufficiently powerful to enable the insect to leave its prison in the earth and walk about. Shortly afterwards the skin is cast off, and the perfect fly ascends the stem of some plant, and dries and expands its wings. The imago appears from the middle of November until the middle of January. It is seldom seen in the daytime, but is usually observed at evening dusk, flying in rather a slow and...
